

[Free DNA Workshop: Saturday, October 5th](#)

Based on your positive reflections on my recent DNA postings, I will post free upcoming DNA workshops along the Colorado Front Range. There is one this Saturday in Fort Collins that has two highly acclaimed presenters: **Glenn York and Tammie Gregori**. Their bios are very impressive at:

<https://www.lcgsc.org/events/introduction-to-genetic-genealogy-and-dna-testing-with-glenn-york-and-tammie-gregori-3/>

In the past, the DNA workshops sponsored in the Loveland and Fort Collins areas have been generally very well attended and worth the drive. If interested, do not hesitate to attend since registration is required to guarantee a computer workstation.

Hope this information is helpful and once you are on their mailing system, there will be many other free family history workshops offered in the future. In the meantime, I will be searching for Denver-area DNA meetings and workshops as well since this is an area that most of us need to pursue but lack the knowledge to fully utilize it especially since technology is rapidly changing and improving. So before you spend any money on DNA tests, it is important to become more knowledgeable first before making any purchases. Note: each major company's DNA tests do not all record their information in the same depth so investigate first. Here are four basic questions you will need to consider before proceeding further about DNA tests.

- Which DNA test is best for your situation?
- Which DNA test is the most accurate for your situation?
- Are the DNA tests accurate?
- How do DNA tests work?

Class: Introduction to Genetic Genealogy and DNA Testing

with

Glenn York and Tammie Gregori

Saturday, October 5th - 9:30 am to 12:30 pm

Community Room

Fort Collins Downtown Library

This presentation will discuss *DNA testing* and how the different tests can be used as additional tools in your genealogy toolbox. We will cover the main testing companies and the main tests used in genealogy research. We will discuss the best tests to use to solve different genealogy challenges.

More information available on [LCGS WEBSITE](#)

This Class is **Free** but you must **Register** on the [LCGS WEBSITE](#)
